IMAGING LASER SCANNER

## RELEASE NOTES

Firmware version 3.0.0 – April 29<sup>th</sup>, 2025.

We are pleased to announce the release of the Leica BLK360 Firmware v3.0.0. This version can be loaded on all BLK360 devices of the latest generation.

This release notes contains important information about the Leica BLK360 firmware v3.0.0.

With immediate effect, the new firmware can be downloaded from myWorld Customer Portal:  
<https://myworld-portal.leica-geosystems.com>

and Leica BLK360 website:

<https://shop.leica-geosystems.com/leica-blk/blk360/blk360-firmware>

IMAGING LASER SCANNER

## WHAT'S NEW

- **New feature - Automated daily new job generation**

When using the device in stand-alone operation mode to capture scans, a new job will be automatically generated on daily basis.

This feature has been added to reduce the necessity of creating a new job from the field apps (Cyclone FIELD 360 or BLK Live) and organize the scan groups more efficiently.

The device may be turned off one or more times during the day, but if all the scans are completed within the same day, a new job will not be automatically generated.

Hint: If it is needed to divide a single day of scanning into multiple jobs, it can be easily done during the import process in Cyclone REGISTER 360 PLUS and/or Cyclone REGISTER 360 PLUS BLK Edition.

Note: This feature is supported since firmware version 2.0.0.

## BUG FIX

- After updating the device firmware to version 2.0.0, in rare cases, it will boot up in red LED (unrecoverable system error).

This issue has been fixed in this version (3.0.0).

- Other minor bug fixes.

It is recommended to update your Leica BLK360 to the latest firmware version (3.0.0) to benefit from these enhancements.
